

Night Rating – Information Package

Overview

The Night Rating allows you to fly an airplane at night. A night rating can be an add-on to your Private Pilot Licence and is included in your training toward the Commercial Pilot Licence.

Summary

Title:	Night Rating
Prerequisites:	Private Pilot Licence
Schedule:	Part-Time or Full-Time
Intake:	Continuous
Duration:	1 month (Depends on student schedule)
Cost:	Approximately \$3195.00

Advanced Standing

Applicants who have partially completed night flight training hours or instrument time at another flight school may be credited advanced standing in accordance with Transport Canada regulations and at the discretion of the Chief Flight Instructor.

Program of Study

The Night Rating consists of a minimum of 20 hours flight time, including the following:

- 10 Hours Dual Instrument Time (Max 5 in Simulator/5 hours Instrument time can be credited from the PPL)
- 5 Hours Dual Night Time (Including 2 Hours Cross-Country)
- 5 Hours Solo Night Time (Including 10 Takeoffs, Circuits, and Landings)

There is no ground school requirement for the night rating. Your instructor will conduct a one-on-one briefing regarding night flying techniques and human factors considerations.

Payment Schedule – Night Rating

Due to the large costs associated with flight training, MAG Aerospace Canada does not expect students to pay tuition fees upfront or in large installments. MAG Aerospace Canada utilizes the "Pay-Per-Lesson" method, where the student settles their invoice after each lesson. Please contact us for up-to-date pricing.

Graduation

Students graduate the program when they have completed the required number of hours and have demonstrated adequate night flying proficiency to their instructor.

Enrollment

Enrollment for this program is continuous, meaning students can start flight training toward the Night Rating at any time. However, MAG Canada does not generally do night ratings between May-August because of the long daylight hours during summer months.

Apply to train with MAG Aerospace Canada
